

Rashmi Liyanawadu

Full Stack Software Engineer

✉ dinekarashmi@gmail.com 📞 +94 713156713 📍 Colombo, Sri Lanka  [Linkedin](#)  [Github](#)

Full-stack engineer with 4+ years building production SaaS products. Currently engineering core features of an AI-powered CRM used by 100+ sales teams – spanning multi-channel automation, LLM workflows, and a real-time unified inbox. Strong across the React/TypeScript/NestJS/GraphQL stack with growing expertise in AI integration and distributed systems.

EXPERIENCE

Software Engineer – Full Stack Jun 2024 – Present
Dalil-AI . AI Sales OS . UAE (Remote) – usedalil.ai .

LangChain Multi-tenant SaaS NestJS GraphQL React TSX Apollo Client
Recoil Vite Storybook BullMQ Kafka Redis PostgreSQL TypeORM

- Engineered the multi-channel automation sequence system (email, LinkedIn, WhatsApp) – the platform's flagship feature supporting WhatsApp sends, email sends, and LinkedIn connects running concurrently across 100+ tenant accounts.
- Built the unified inbox aggregating LinkedIn, WhatsApp, and email into a single real-time interface, eliminating context-switching for sales teams and directly contributing to customer acquisition of clients like Liively.
- Designed and implemented the trigger-based workflow engine when a prospect declines, they're auto-tagged as lost; when they reply, stage updates and tasks fire automatically reducing manual CRM work by 10+ hours/rep/week per customer results.
- Integrated LangChain for AI-written outreach personalization, enabling hyper-personalised sequences that achieved 4x more replies vs. generic outreach.
- Optimized frontend performance through custom React hooks, WebSocket integration, and RTK Query caching significantly reducing unnecessary re-renders and API call frequency across the app.
- Built a reusable component library in Storybook with Emotion CSS-in-JS, accelerating UI development velocity across the team.
- Integrated Sentry error monitoring and OpenTelemetry instrumentation for full-stack observability across a distributed Nx monorepo.
- Implemented SSO authentication (Azure AD & Google) with multi-tenant session management.

Associate Software Engineer – Full Stack Dec 2023 – Jun 2024
Onezerro (Pvt) Ltd. . Colombo (On-site)

React JS Next.js Node.js MySQL AWS SwiftUI Amadeus SOAP

- Integrated Amadeus SOAP APIs for live flight search, booking, and travel service features in a full-stack booking platform.
- Built a real-time iOS location tracking module using SwiftUI, adding live user location to the mobile experience.
- Developed REST APIs and managed React Redux state architecture for a seamless, performant user experience.
- Full-stack flight booking platform with live Amadeus SOAP API integration for real-time flight search and reservations. Responsive Next.js UI with Node.js REST backend deployed on AWS.

Java

Spring Boot

Angular

SQL

RedHat

Swagger

- Built scalable backend services using Spring Framework for enterprise clients including NMRA and ETFB.
- Implemented multilingual UI support across Angular frontends, enabling accessibility for a diverse user base.

EDUCATION

MSc Adavanced Software Engineering - Reading Informatics Institute of Technology (IIT) University of Westminster (UK)	2025 – 2026
BEng (Hons) Software Engineering - First Class Honours Informatics Institute of Technology (IIT) University of Westminster (UK)	2019 – 2023
CCNA Routing and Switching Network Course Sri Lanka Institute of Information Technology (SLIIT)	2018 – 2019

INDIVIDUAL PROJECTS

ExplainChess – MSc Dissertation (2025–2026)
Explainable AI system that predicts chess puzzle difficulty (Glicko-2 rating) using a CNN-MLP ensemble trained on 3.4M Lichess puzzles. CNN branch processes 8×8×12 board tensors for spatial pattern recognition; MLP branch uses 15+ Stockfish-derived features. SHAP values provide human-readable explanations of difficulty factors. Includes automated quality assessment to flag puzzles with multiple solutions or incorrect theme tags.

Python . PyTorch . LightGBM . SHAP . Stockfish . Flask . Next.js . AWS

PureXkin – BEng Final Year Project (2022–2023)
Deep learning skincare analysis app that classifies skin conditions from user images and recommends personalised routines. Built an ensemble classification model achieving strong accuracy on a limited dataset using transfer learning. Integrated a React JS web app for real-time predictions and ingredient compatibility checking.

Python . Deep Learning . TensorFlow . Flask . MySQL . React JS . REST

SKILLS

Frontend React, Next.js, TypeScript, GraphQL, Apollo Client, Recoil, Vite, Storybook, Emotion, Tailwind, Material UI	Backend & Architecture NestJS, Node.js, GraphQL API, REST, BullMQ, Kafka, Redis, TypeORM, Nx Monorepo, Multi-tenant SaaS, Spring Boot, Flask
AI & Machine Learning LangChain, OpenAI API (GPT-4o), Prompt Engineering, TensorFlow, PyTorch, LightGBM, SHAP, Keras	Databases & Cloud PostgreSQL, Supabase, MySQL, MongoDB, Redis, AWS
Mobile & Tools SwiftUI, Android, Figma, Jira, Swagger, Agile, N8N	DevOps & Observability Docker, GitHub Actions CI/CD, Sentry, OpenTelemetry. <i>learning: Kubernetes, Grafana</i>
